¹KAIST ²Luma AI

Introduction

● Geometry-based Novel View Synthesis

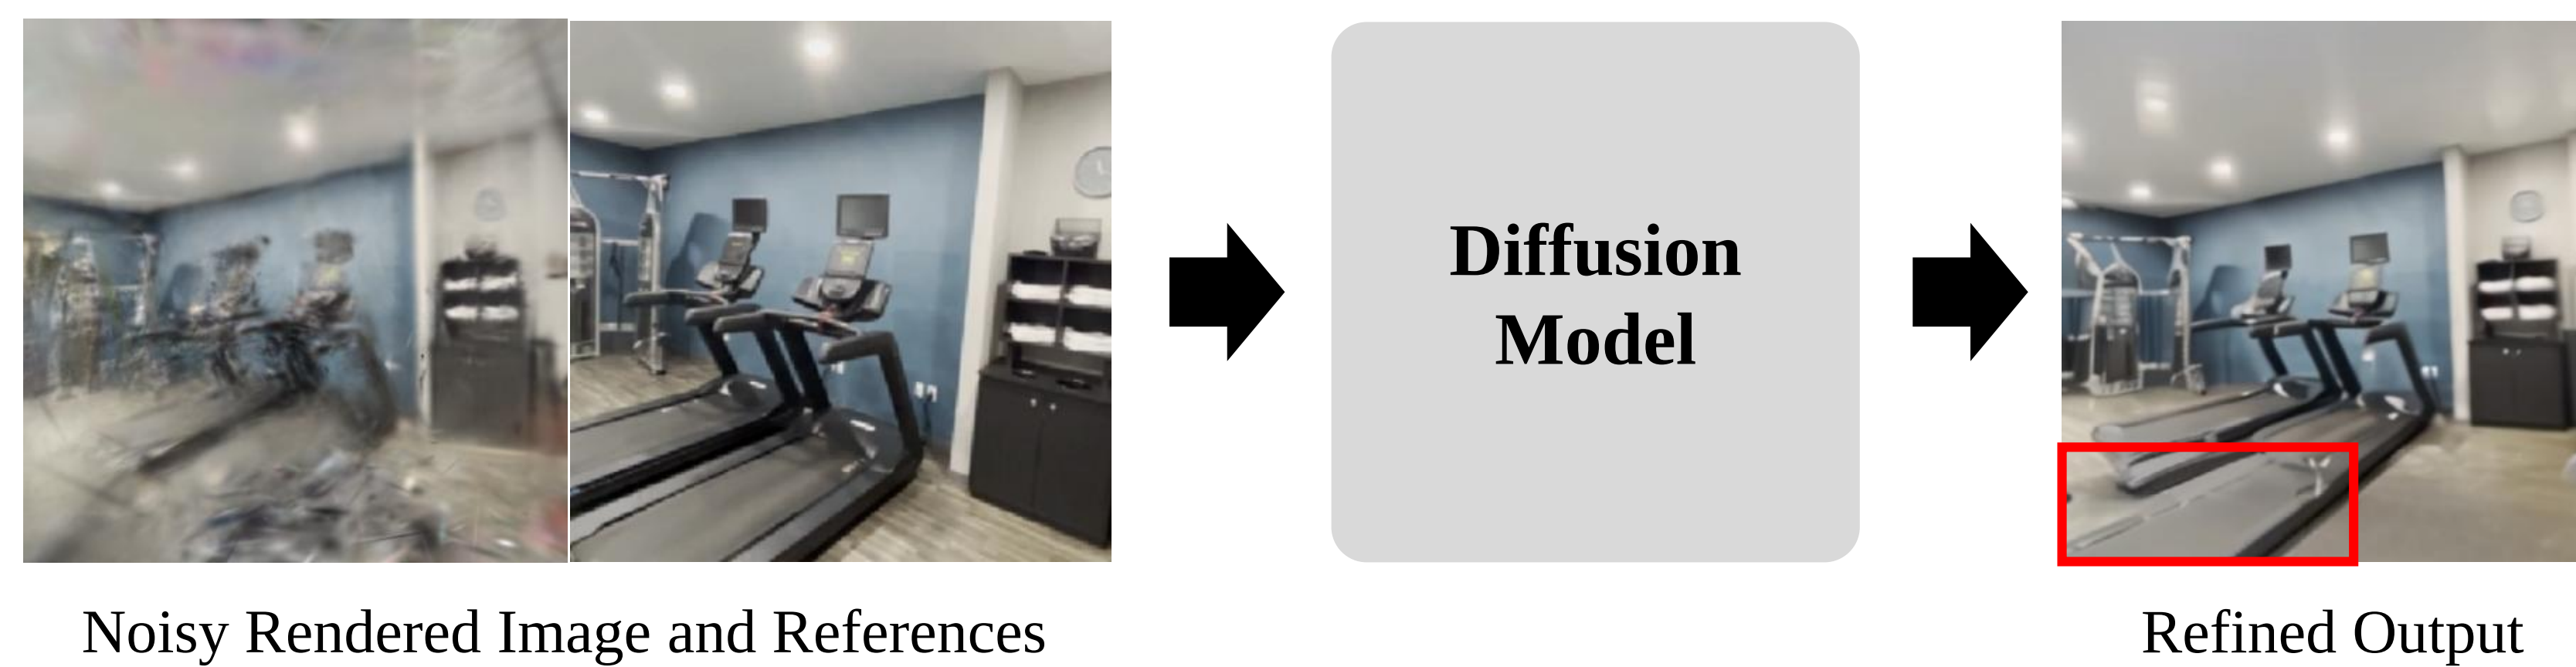

● Generative Novel View Synthesis

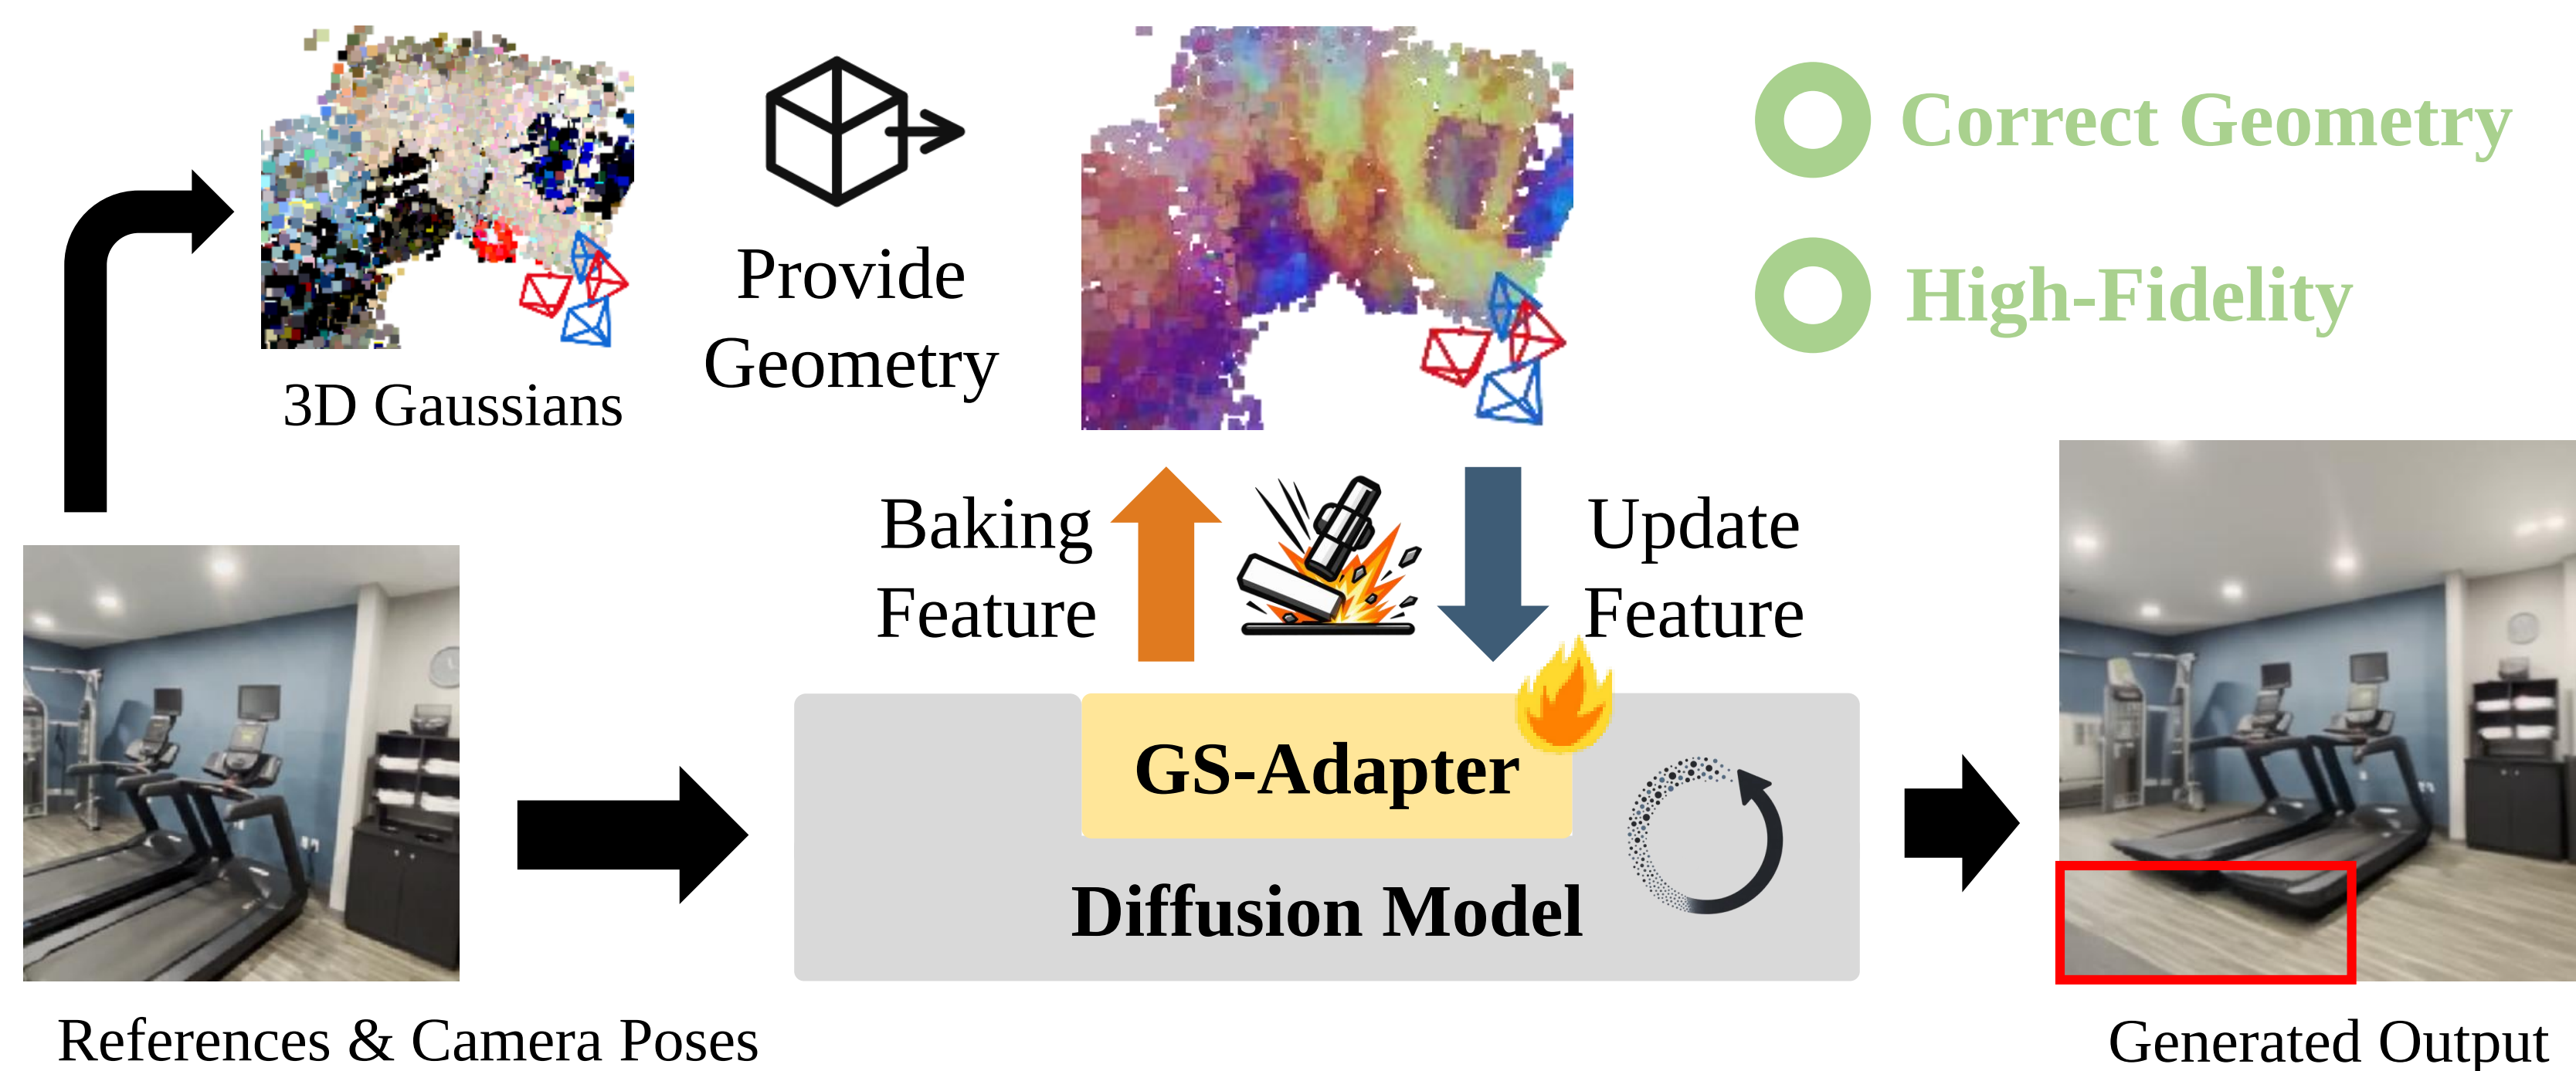

Motivation

● Baking Geometry into Video Generation Model

Previous Methods (Difix3D, MVSplat360 ...) : Render & Refinement

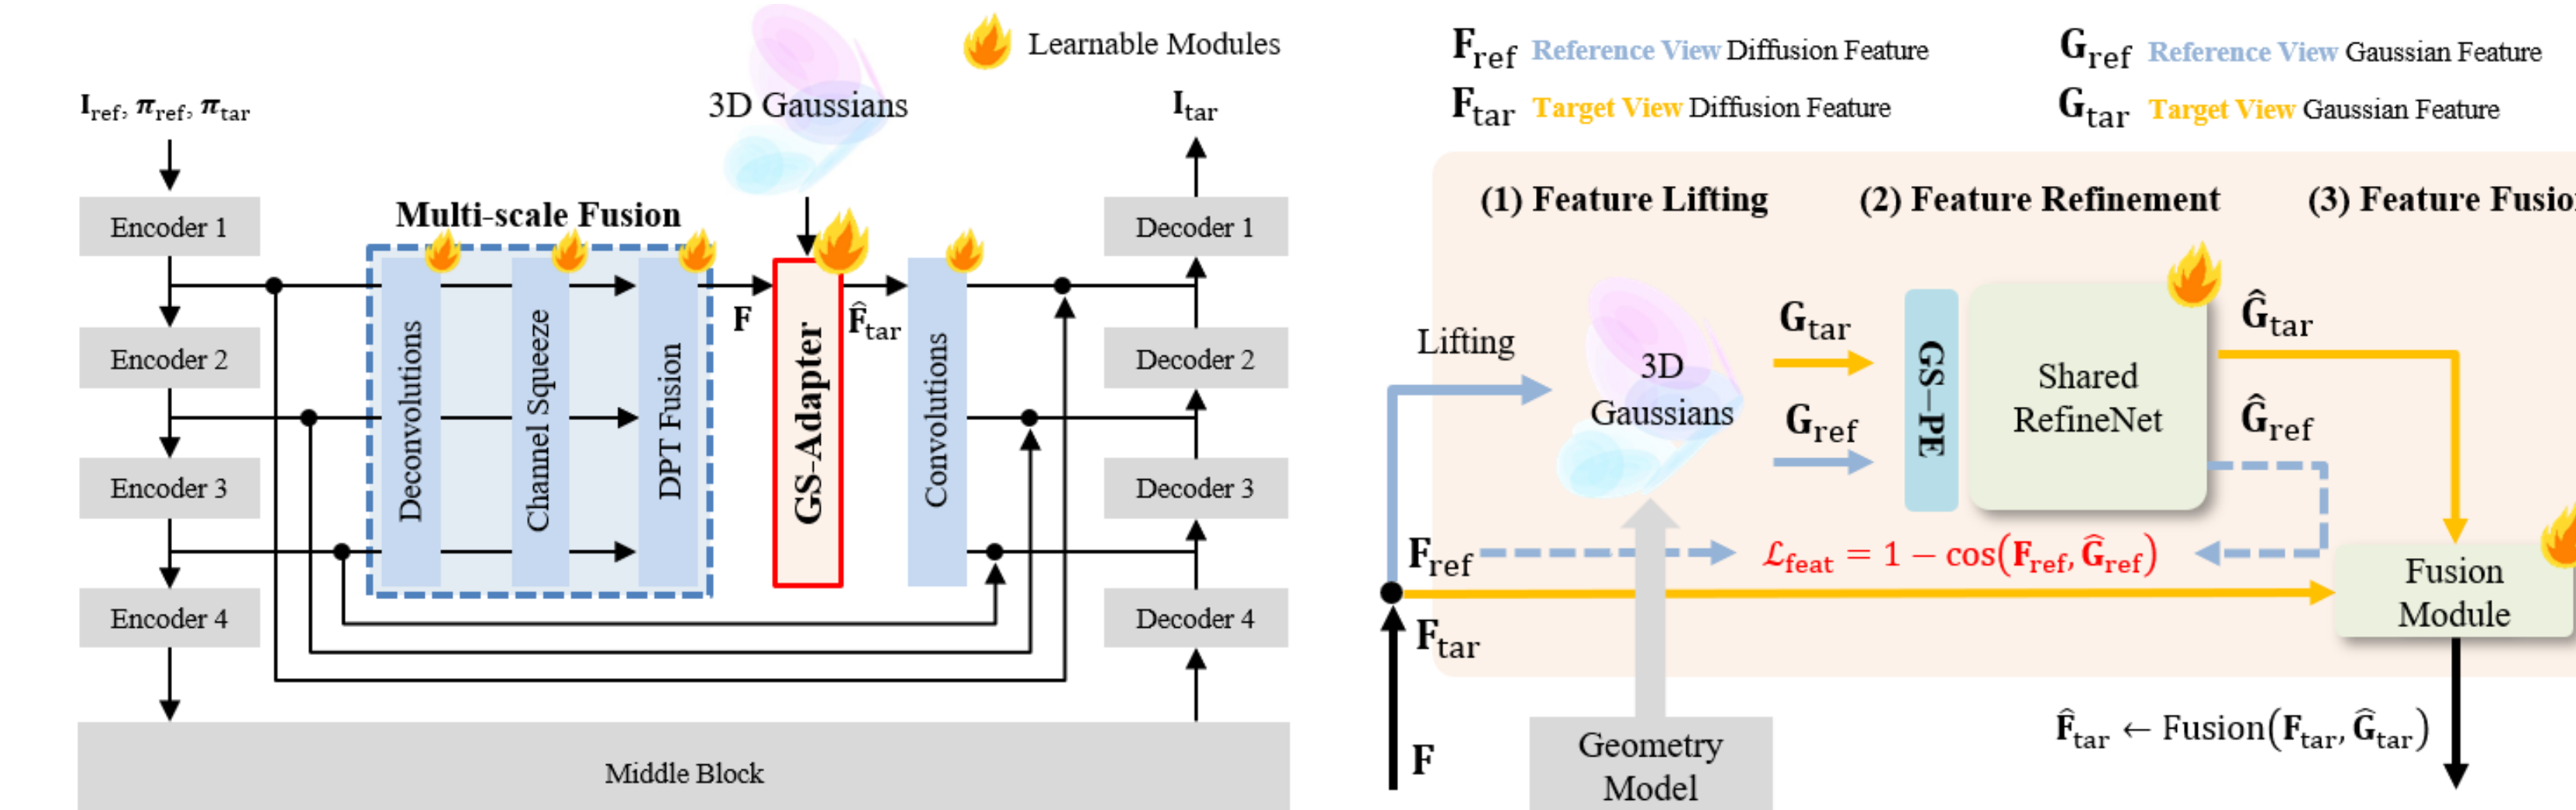

Our Method : Iterative Refinement with Geometry Prior

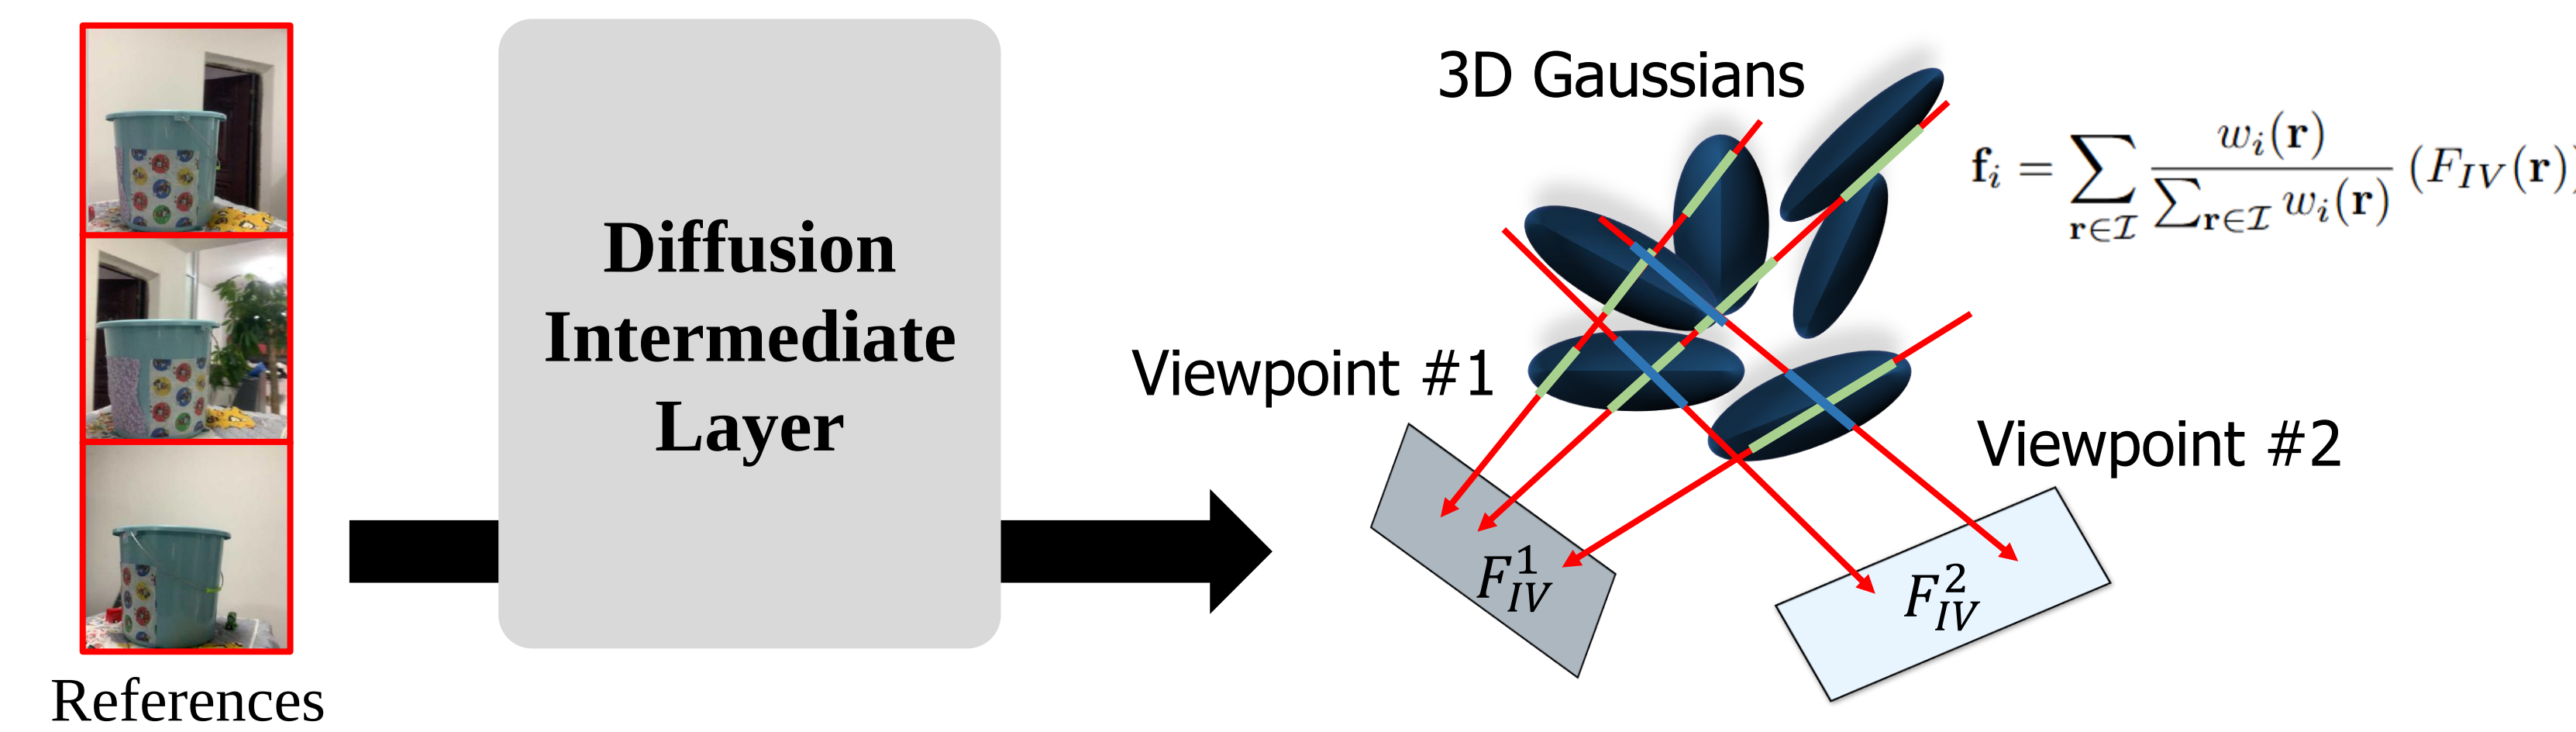

Method

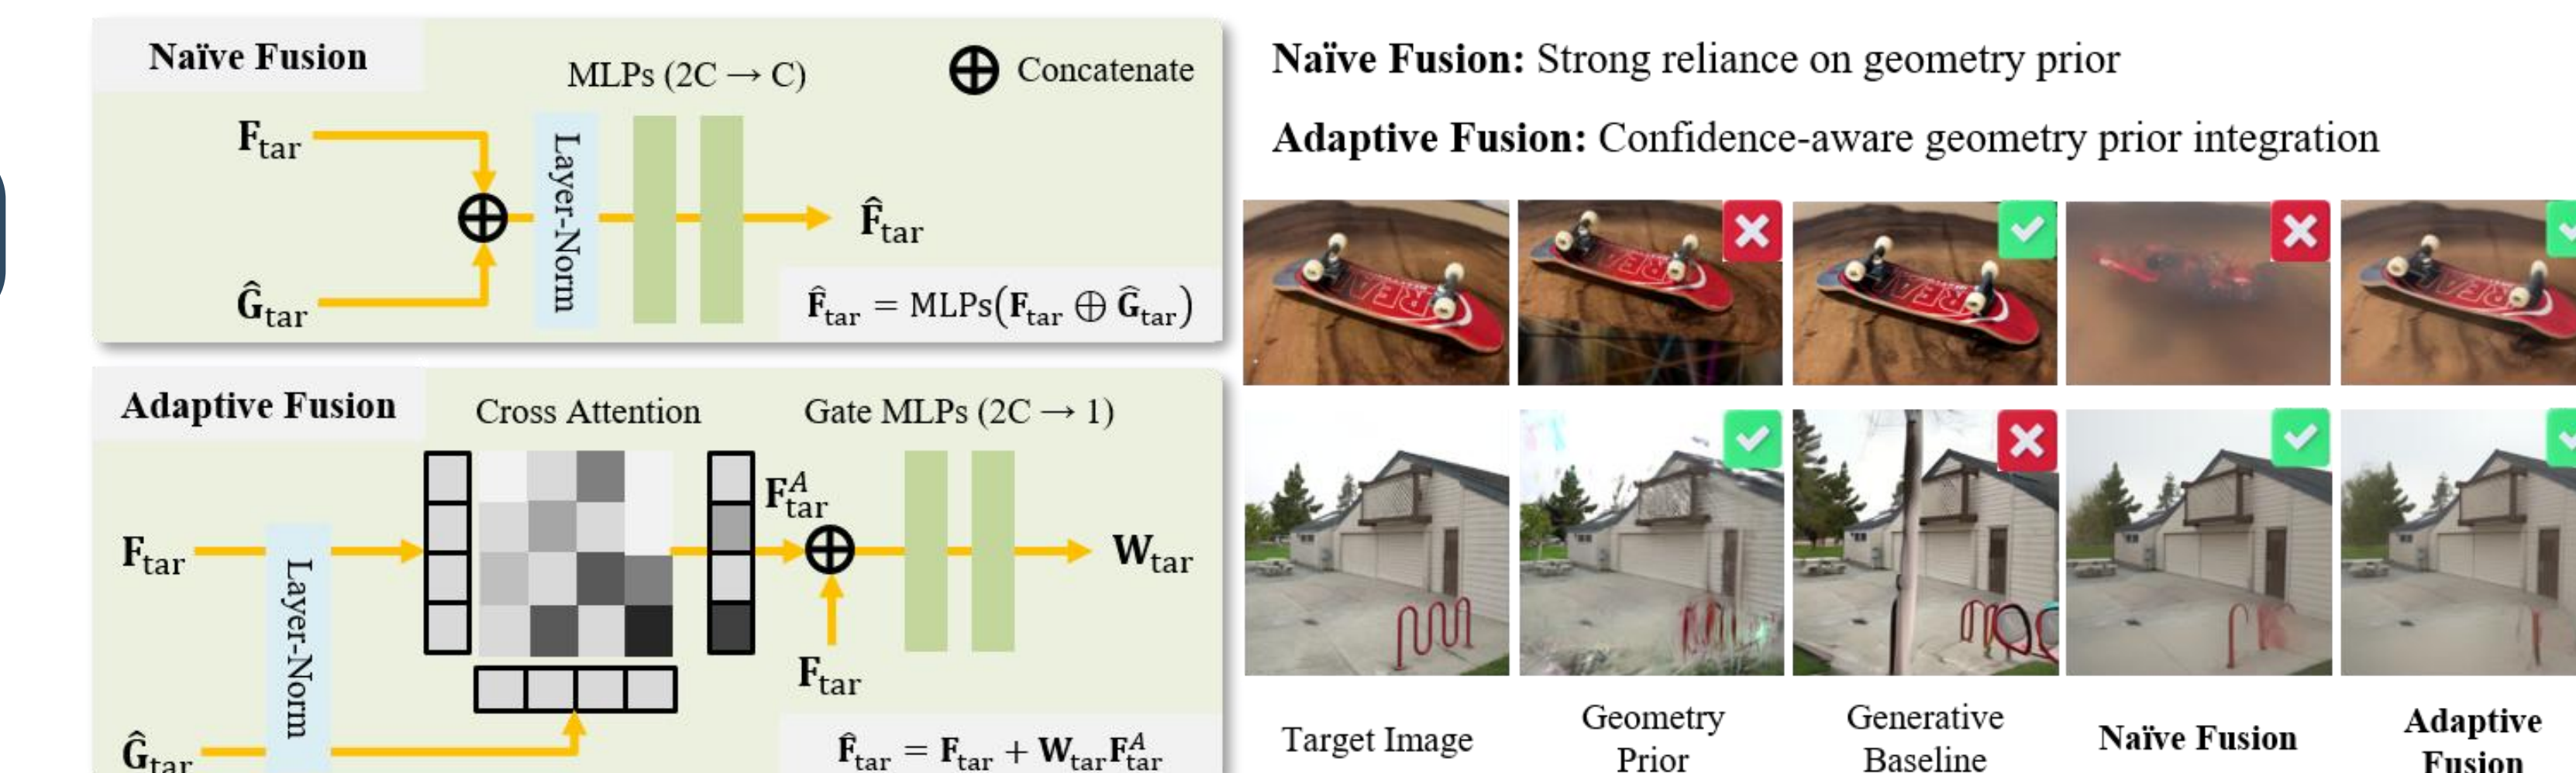

● Overall Architecture and GS-Adapter

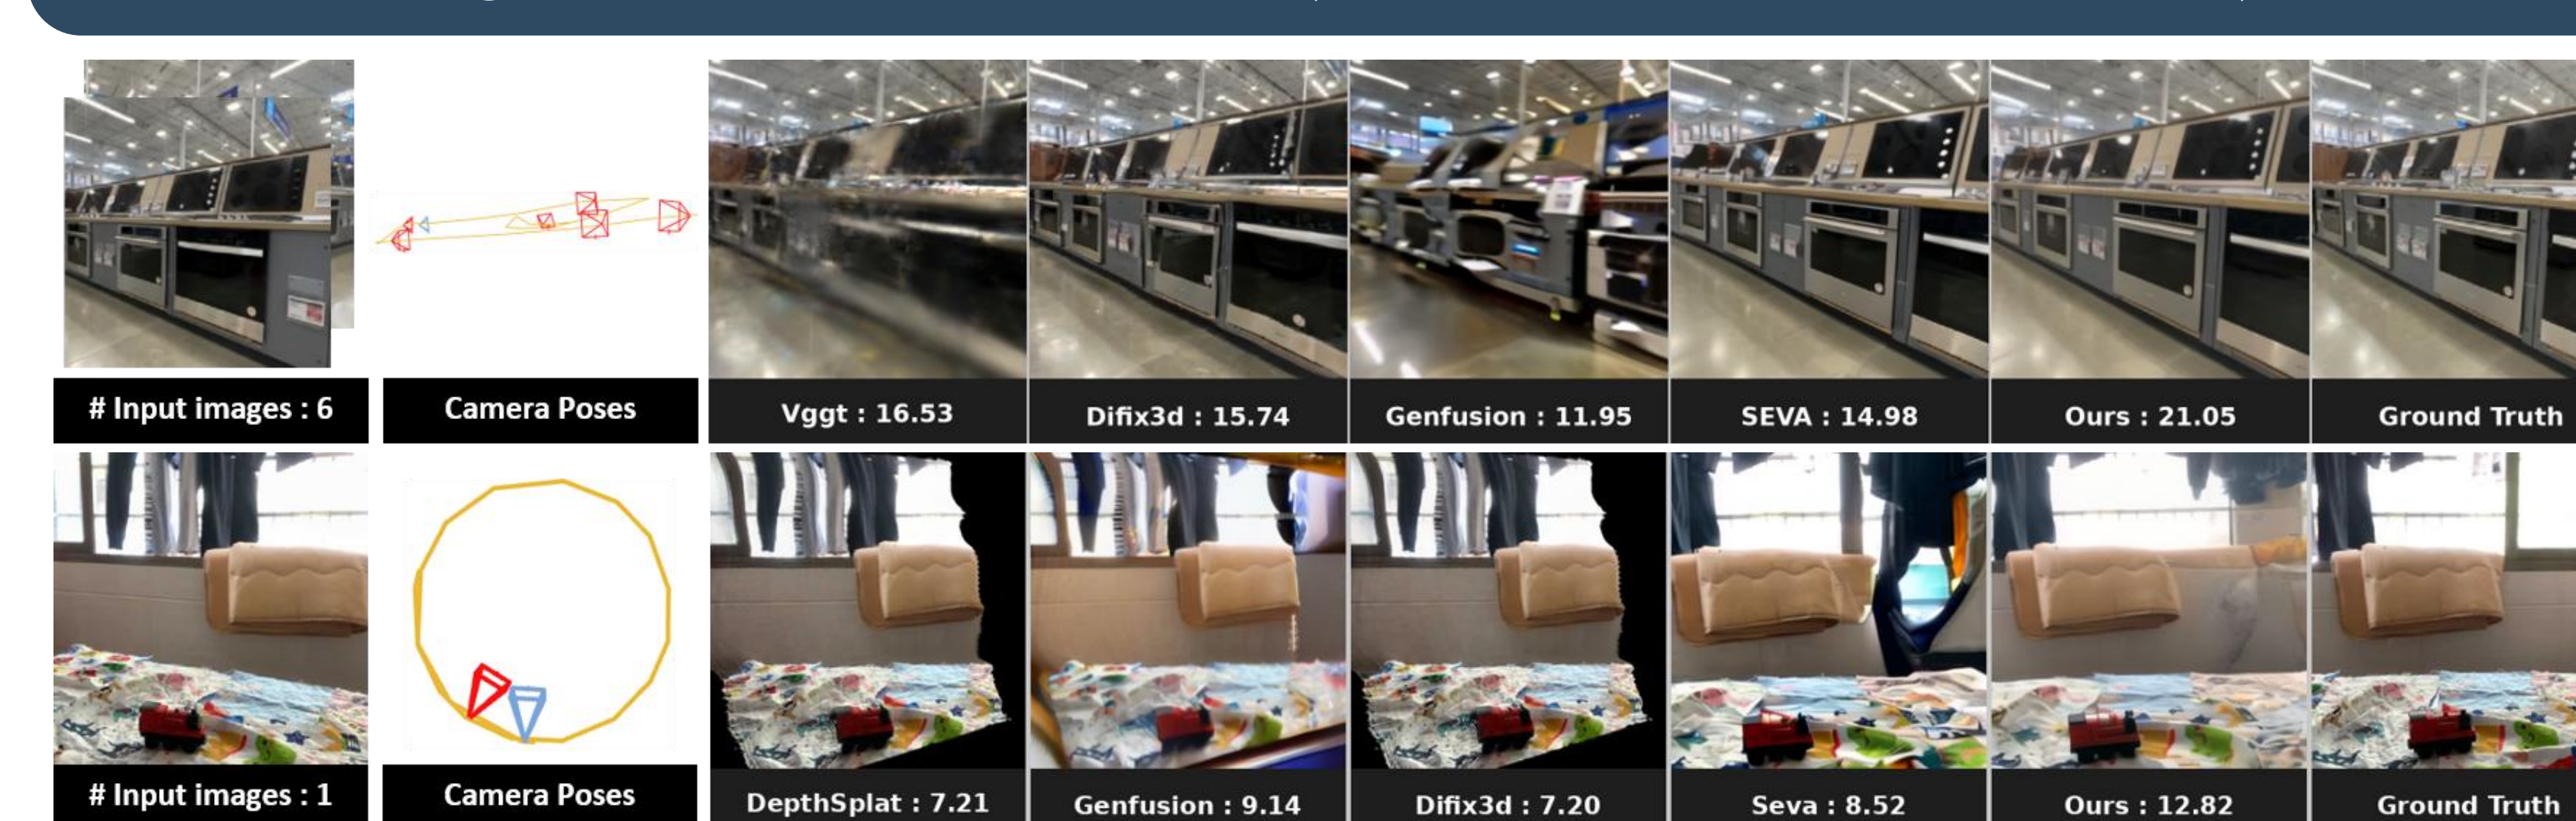

● Diffusion Feature Uplifting to 3D Gaussians

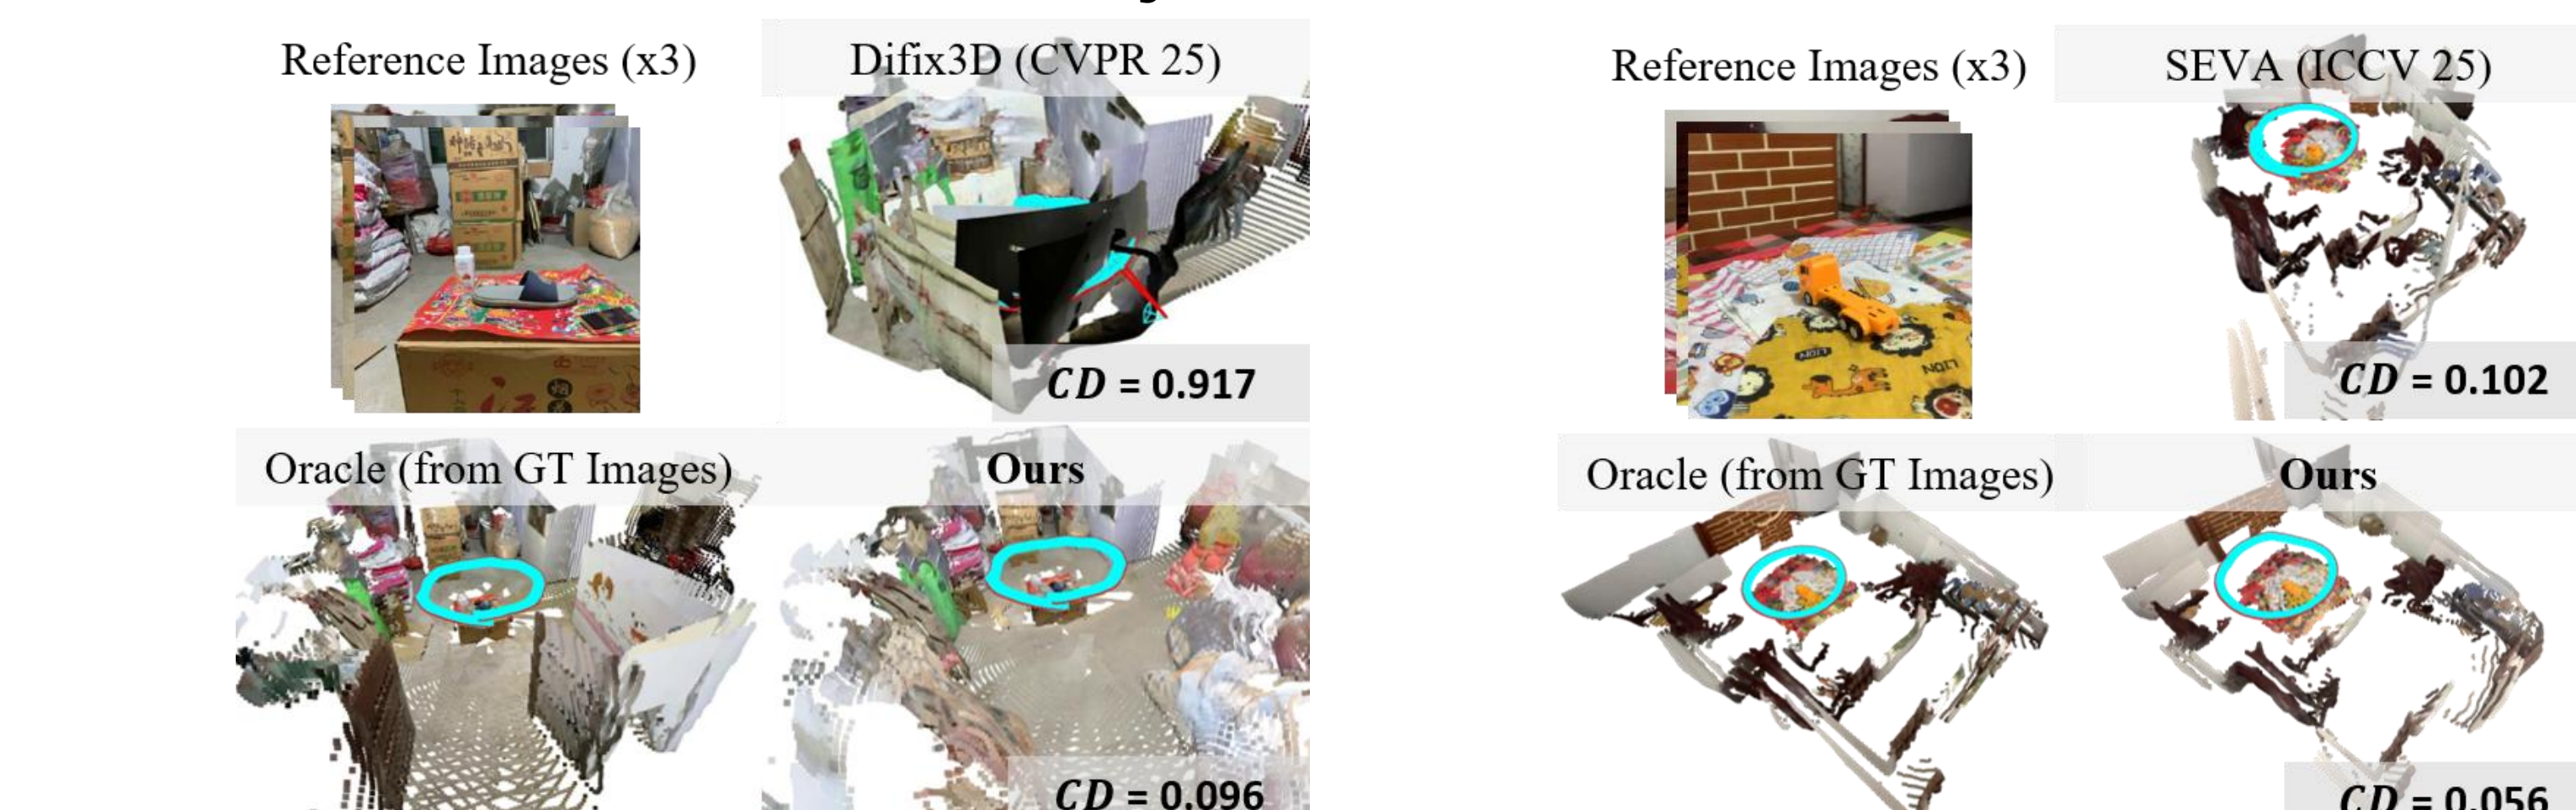

● Adaptive Fusion : Confidence-Guided Feature Fusion

Qualitative Results (PSNR / Chamfer Distance)

● Structure from Motion by Generated Video

Experiments

● Image Quality Metric for Novel View Synthesis

Method	RE10K			DTU		CO3D		WRGBD		Mip360	DL3DV	T&T		Average
	D-1	R-1	R-3	R-1	R-3	V-1	R-3	S _c -3	S _n -6	R-6	S-6	L-9	O-2	O-3

	T _{err} ↓	R _{err} ↓	CD ↓	T _{err} ↓	R _{err} ↓	CD ↓	T _{err} ↓	R _{err} ↓	CD ↓
Baselines									
SEVA [ICCV 25]	18.76	3.29	0.07	13.85	13.01	19.68	2.80	0.57	15.68
Generative model + VGGT [CVPR 25]									
Difix3D [CVPR 25]	219.39	51.64	0.68	12.92	11.82	64.4	9.66	3.76	16.11
SEVA + Input-level injection	233.03	99.79	1.02	13.14	12.03	81.14	17.19	3.82	16.76
Ours	16.24	2.98	0.07	15.11	14.07	13.27	2.01	0.41	18.11

● GS-Adapter transfers zero-shot to unseen geometry prior.

● Adaptive Fusion suppresses unreliable geometry.

Key Contributions

- Feature-level fusion of 3D Gaussians achieves robustness to rasterization noise in diffusion-based NVS.
- Adaptive gating selectively trusts geometry or diffusion features per pixel.
- GeoNVS achieves SOTA fidelity and geometric consistency across 8 benchmarks.
